7.2.8 CEC Control

If the input sources, HDBaseT output devices and local HDMI output devices are supports CEC, they can be controlled by sending the following command instead of IR remote.

CEC[I/O][AA][BB][CC][DD].

- The “[I]” represents the input port. The “[O]” represents the output port.
- The “[AA]” represents the port number. The HDMI input ports are 01~04. The HDMI output ports are 01~04.
- The “[AA]” is “FF” for sending command to all input or output ports.
- The “[BB]” represents the device type (e.g. TV: 40/20/80; Blu-ray DVD: 04/08).
- The “[CC]” represents the CEC function type (e.g. “44”: Remote control).
- The “[DD]” represents the specific command from the table below.

✓ Control the input source:

8. Firmware Upgrade

Please follow the steps as below to upgrade firmware by the **FIRMWARE** port on the rear panel:

- 1) Prepare the latest upgrade file and rename it as "08010000.APP" on PC.
- 2) Power off the switcher, and connect the **FIRMWARE** port of switcher to the PC with USB cable.
- 3) Power on the switcher, and then the PC will automatically detect a U-disk named of "BOOTDISK".
- 4) Double-click the U-disk, a file named of "READY.TXT" would be showed.
- 5) Directly copy the latest upgrade file 08010000.APP (.bin) to the "BOOTDISK" U-disk.
- 6) Reopen the U-disk to check the filename "READY.TXT" whether automatically becomes "SUCCESS.TXT", if yes, the firmware was updated successfully, otherwise, the firmware updating is fail, the name of upgrade file (.bin) should be confirm again, and then follow the above steps to update again.
- 7) Remove the USB cable after firmware upgrade.
- 8) After firmware upgrade, the switcher should be restored to factory default by sending command.

10. Troubleshooting & Maintenance

Problems	Potential Causes	Solutions
Color loss or no video signal output	The connecting cables may not be connected correctly or may be broken.	Check whether the cables are connected correctly and in working condition.
	Failed or loose connection.	Make sure the connection is good
No output image when switching	No signal at the input / output end.	Check with oscilloscope or multimeter if there is any signal at the input/ output end.
	Failed or loose connection.	Make sure the connection is good.
	Input source has HDCP while the HDCP compliance is switched off.	Send command /%[Y]/[X]:1. or change HDCP compliance status in GUI.
	The display doesn't support the input resolution.	Switch to another input source or enable the display to learn the EDID data of the input.
Cannot control the device via front panel buttons	Front panel buttons are locked.	Send command /%Unlock; or select unlock in GUI interface to unlock.
Cannot control the device via IR remote	The battery has run flat.	Replace the battery.
	The IR remote is broken.	Send it to an authorised dealer for repair.
	Beyond the effective range of the IR signal or not pointing at the IR receiver.	Adjust the distance and angle and point directly at the IR receiver.
	The IR receiver connected to IR IN port is not with carrier.	Change for an IR receiver with carrier.
EDID management does not work normally	The HDMI cable is broken at the output end.	Replace with another HDMI cable which is in good working condition.
There is a blank screen on the display when switching	The display does not support the resolution of the video source.	Switch again.
		Manage the EDID data manually to make the resolution of the video source automatically compliant with the output resolution.

Note: If your problem persists after following the above troubleshooting steps, seek further help from authorised dealer or our technical support.
